

ALUMINIUM GLITTER

Geometal® glitter are brilliant particles of precision cut aluminium foil. The main characteristic of Geometal® glitter is its high temperature resistance up to 265 degrees Celsius without loss of colour or reflectivity. Geometal® glitter is mainly used in thermo-plastic processing applications to add sparkling effects.

Geometal® glitter is available in silver and black. Geometal® is cut out of a 12 µm thick foil and available in particle sizes of 100 µm, 200 µm and 400 µm.
