

METALLIC RANGE

Geopearl® I metallic effect enhancing pigments offer metallic pearlescent effects in a combination of lustre, reflection, brilliance and transparency. These pigments are based on mica flaked substrates which are coated with iron oxides.

Geopearl® I metallic pearlescent pigments offer metallic lustre effects and vary in lustre from silky and smooth to glittering, depending on the particle size distribution.

Geopearl® I pearlescent pigments give an unprecedented styling potential. **Geopearl®** I pearlescent pigments can be combined with conventional pigments to create unlimited coloured effects. These products can be used in a wide variety of products such as plastics (masterbatches), coatings and inks. The **Geopearl®** industrial range complies to all relevant regulations and is U.V., solvent and high temperature resistant.
