

COSMETIC CRYSTAL AMBER RANGE

Geoparl® C Crystal Amber effect enhancing pigments offer amber pearlescent effects in a combination of lustre, reflection, brilliance and transparency. These pigments are based on synthetic mica flake substrates which are coated with iron oxide. Compared to natural mica, synthetic mica offers more reflectivity and higher colour purity.

Geoparl® C Crystal Amber pearlescent pigments vary in lustre from smooth to glittering depending on the particle size distribution.

Geoparl® C Crystal pearlescent pigments give an unprecedented styling potential. Geoparl® C Crystal pearlescent pigments can be combined with conventional pigments to create unlimited coloured effects. These products can be used in cosmetic applications. The Geoparl® Cosmetic Crystal range complies to all relevant cosmetic regulations and is U.V., solvent and high temperature resistant.

COSMETIC CRYSTAL AMBER RANGE

Geoparl C Crystal Amber 10-75 µm
