

## COSMETIC CRYSTAL TITANIUM RANGE

Geoparl® C Crystal Titanium effect enhancing pigments offer metallic silver effects without usage of aluminium, making this range perfectly suitable for waterbased formulations. These pigments are based on synthetic mica flake substrates which are coated with titanium dioxide in an innovative way, resulting in metallic rather than pearlescent effects with excellent hiding power. Compared to natural mica, synthetic mica offers more reflectivity and higher colour purity.

Geoparl® C Crystal Titanium pearlescent pigments vary in lustre from soft to glittering depending on the particle size distribution.

Geoparl® C Crystal pearlescent pigments give an unprecedented styling potential. Geoparl® C Crystal pearlescent pigments can be combined with conventional pigments to create unlimited coloured effects. These products can be used in cosmetic applications. The Geoparl® Cosmetic Crystal range complies to all relevant cosmetic regulations and is U.V., solvent and high temperature resistant.

## COSMETIC CRYSTAL TITANIUM RANGE

Geoparl C Crystal Soft Titanium 1-15 µm

Geoparl C Crystal Titanium 10-60 µm

Geoparl C Crystal Glittering Titanium 50-200 µm
